

Assignment 11

Q1. Write a program to read two strings. Find the occurrence of second string in the first string. Reverse the case of each occurrence in the string and display resultant string

Ans:

object String_rev

```
{  
    def main(args:Array[String])  
    {  
        var s1 :String = "good morning"  
        var s2 : String = "good night"  
        println("first string => "+s1)  
        println("second string => "+s2)  
        var s3 = s2.intersect(s1)  
        println("occurrence of 2nd string in 1st string => "+s3)  
        println("reverse the case of string =>"+s3.toUpperCase())  
    }  
}
```

Output:

first string => good morning

second string => good night

occurrence of 2nd string in 1st string => good nig

reverse the case of string =>GOOD NIG
